

Wild DNA

Site report sheet

In the first row, write down which site your eDNA samples have come from.

Put a tick next to the species found at this site, identified from the eDNA sequences in the 'Site data file'.

Site number:		
Scientific name	Common name	Present
<i>Lutra lutra</i>	European otter	
<i>Arvicola amphibious</i>	Water vole	
<i>Rattus norvegicus</i>	Brown rat	
<i>Neogale vison</i>	American mink	
<i>Alcedo atthis</i>	Common kingfisher	
<i>Ardea cinerea</i>	Grey heron	
<i>Gallinula chloropus</i>	Common moorhen	
<i>Anas platyrhynchos</i>	Mallard duck	
<i>Cygnus olor</i>	Mute swan	
<i>Rana temporaria</i>	Common frog	
<i>Anguilla anguilla</i>	European eel	
<i>Esox lucius</i>	Northern pike	
<i>Perca fluviatilis</i>	European perch	
<i>Phoxinus phoxinus</i>	Common minnow	
<i>Rutilus rutilus</i>	Common roach	
<i>Pacifastacus leniusculus</i>	North American signal crayfish	
<i>Argyroneta aquatica</i>	Water spider	
<i>Anax imperator</i>	Emperor dragonfly	
<i>Sympetrum striolatum</i>	Common darter	
<i>Ephemera danica</i>	Common mayfly	

Consider what impact species may have on an ecosystem.

Which of these species are predators?

Are there any endangered species present?

Are there any invasive species present?

Are any species indicators of good water quality?
